Experience

Infrastructure and Security Engineer Intern — CyBE Global / CSA Bangalore June 2026 – Present

- Validated AI cybersecurity course content and hands-on labs across 3 courses, identifying and resolving 50+ issues involving broken Docker environments, missing files, incorrect commands, and validation errors to improve training-environment reliability.
- Contributed to a scoped, read-only SRM admin role for CAIGL cohort registrations, implementing least-privilege access boundaries across the admin route tree and a fixed-event API projection that excludes login tokens and payment identifiers; added authorization regression coverage for cross-event access and prohibited write operations.
- Added two Workshop Arena sessions on shadow AI discovery and vendor AI risk, including scenario-based questions, facilitator notes, and validation of unique IDs, answer keys, and image paths.

Product Security Intern — MeeraAI Technologies Jan 2026 – June 2026

- Identified a JWT response exposing user phone numbers and a mobile client exposing the Gemini API key and full system prompt; reported both with remediation steps through hands-on LLM attack-surface testing.
- Discovered a Razorpay payment API secret returned in plaintext through an authenticated API response, documented credential-exposure impact, and validated remediation with the developer team.
- Conducted a cloud penetration engagement chaining DNS enumeration, exposed EC2 infrastructure, direct backend access bypassing the Nginx reverse proxy, and an IAM role with production S3 permissions; traced the path to security groups permitting unrestricted inbound TCP.
- Identified email-spoofing risk from missing SPF, DMARC, and DKIM policies; authored the product Privacy Policy after a pre-launch DPDPA audit identified gaps in breach response and third-party data-sharing controls.

OSINT Investigator & Analyst Intern — DeepCytes June 2024 – Dec 2024

- Conducted reconnaissance across 10+ incidents involving fraud, account takeover, and exposed data using manual techniques, enumeration, and custom automation.
- Researched dark web forums and marketplaces via Tor to source leaked databases; analyzed extracted datasets to assess exposure scope and prepare structured client intelligence reports.

Projects

FireLLM | Python, ChromaDB, SQLite, pytest

- Built an open-source adversarial testing framework for LLM-integrated applications — autonomously profiles targets, generates dynamic attack payloads calibrated to each target's observed defenses, and detects prompt injection, RAG poisoning, and agent abuse across attack surfaces conventional tools miss; 119 passing tests.
- Implemented multilingual semantic intent detection (Urdu, French, base64, leetspeak, roleplay framing) using sentence-transformers with deterministic fallback; blind-tested against two purpose-built vulnerable RAG systems achieving 1.0 precision on confirmed findings.

fath0m | Python, Nmap, NVD CVE 2.0 API

- Built a terminal-based vulnerability scanner combining Nmap service fingerprinting with NVD CVE 2.0 API correlation and version-aware confidence scoring to reduce false positives.
- Integrated exploit-signal checks across Exploit-DB, Metasploit, and public PoC repositories; surfaced references only when supporting evidence was available.

Security Research & Bug Bounty Activity

- Manually tested 20+ bug bounty programs across web and API attack surfaces; responsibly disclosed 8 valid vulnerabilities.
- Findings included 4 Critical vulnerabilities (including SQL injection and XSS leading to account takeover) and 1 High-severity sensitive-information disclosure.
- Reported findings to **APNIC**, **NCIIPC**, Drexel University, and Skoda; received Hall of Fame recognitions (2024).
- **RootRunners:** 1st in Italy, 71st worldwide; CTF competitor and supervisor.

Technical Skills

Web/API Security: Nmap, Amass, ffuf, Nuclei, Burp Suite, IDOR, authentication testing, input validation, OWASP Top 10
Security Testing: SQL Injection, XSS, access-control testing, misconfiguration analysis, Metasploit
Cloud Security: AWS EC2, IAM misconfiguration, security-group analysis, public-exposure detection
LLM Security: Prompt injection, RAG poisoning, agent abuse, LLM attack-surface mapping
Programming: Python, Bash, C, Java
Governance: DPDPA, GDPR, NIST CSF

Achievements & Certifications

- **Rwanda Government Cybersecurity Training:** Led the Red Team component of a four-week engagement coordinated by Bizoneer IT Consulting for the Rwanda Information Society Authority (RISA); facilitated an OWASP Juice Shop exercise and designed and delivered VulnCastle.
- Delivered practical security demonstrations using WiFi Pineapple and USB Rubber Ducky, supporting CyberBit simulation-based training and knowledge transfer alongside the Blue Team lead.
- **5x CTF winner** (including National-Level CTF Winner: Ciphathon'26, 1st Place).
- APIsec Certified Practitioner (ACP) | Certified Network Security Practitioner (CNSP) | Security+ (Ongoing)

Education

Dwarkadas J. Sanghvi College of Engineering 2023 – 2027
B.Tech in Information Technology | CGPA: 8.8/10
